

NGUYEN TRONG LAM

BACKEND DEVELOPER INTERN

(+84)877 707 681 • lamtrongnguyen04@gmail.com • github.com/NTLam108 • Ha Noi, Viet Nam

Education

Ha Noi University of Science and Technology

Major: Computer Engineering. GPA [3.2/4.0]

Ha Noi, Viet Nam

Expected Graduation: 2027

Skills

Back-end: Node.js, Express, Nest.js, ORM (Prisma, Mongoose), JWT, Passport.js, Cookie-parser, Multer, Cron Jobs.

Front-end: React.js, Bootstrap, View Engine (EJS, Handlebar).

Databases: MongoDB, MySQL.

DevOps and Cloud: GitHub, Git Actions, Docker.

Concepts: OOP, Data Structures & Algorithms, MVC, Database Design, API design, Security Mindset.

Programming Languages: JavaScript, TypeScript, HTML5, CSS3, SQL.

Languages: Vietnamese (native), English (TOEIC 780 - Professional Working Proficiency).

Experience

Corporate Car Rental Platform - Personal Full-stack Project

Oct 2025 – Jan 2026

Links: GitHub Repository | Live Demo

- Implemented an **AI Chatbot** using Groq SDK to automate customer support, reducing response latency and enhancing user engagement.
- Integrated **Stripe payment** gateway to process secure online transactions, handling webhooks to automate invoicing and update real-time booking statuses.
- Implemented booking conflict prevention using **transactional validation** and **time-range overlap detection** to ensure vehicle availability consistency.
- Engineered a secure **RBAC system** using Passport.js and custom middleware to separate Admin and Client functionalities

Technologies: Node.js, Express, TypeScript, Prisma ORM, MySQL, Stripe API, Groq Cloud, Passport.js, Zod.

Recruitment Management System - Personal Full-stack Project

Feb 2026 – May 2026

Links: GitHub Repository | Live Demo

- Engineered a secure authentication system featuring **JWT-based Access and Refresh Token** logic, with tokens stored in **httpOnly Cookies** to mitigate XSS and CSRF vulnerabilities.
- Implemented a granular **Role-Based Access Control (RBAC)** system, managing dynamic permissions for various user roles and securing endpoints via **Global Guards**.
- Built a **global NestJS interceptor** to automatically capture and bind user session data to database audit fields (createdBy/updatedAt), eliminating redundant boilerplate code across services.
- Built an **Automated Data Seeding Engine** within the application lifecycle, ensuring consistent deployment by auto-initializing 50+ granular permissions and system roles.
- Integrated a professional mailing service using **Nodemailer, HandleBars and Cron Jobs**, designing dynamic email templates to enhance user engagement for registration and job notifications.

Technologies: Node.js, Nest.js, TypeScript, MongoDB, mongoose ORM, JWT, Cron Jobs, Nodemailer, RESTful API.
